P R E F A C E

The KOSTAT has published Monthly Statistics of Korea since 1958 by collecting and compiling data released by government agencies and other public organizations to provide domestic statistical data on various fields.

This publication contains monthly or quarterly data on the nation's Population, Labor, Industry, Prices, Public Finance, Foreign Trade and Environment to help users grasp the current economic and social trends of Korea.

Including the time series data, this book contains over 13 months' data if possible in order for users to compare the base month with the same month of the previous year. Only if there is space, the book showed data of the past few years as well.

I hope this book will be helpful to users and would like to express my sincere gratitude to the organizations that have contributed their efforts and materials to this book.

2) The figures for the latest month are preliminary.

3) Since 2010, KOSTAT has revised weights on an annual basis. The table shows weights revised in 2021.

4. CPI by Category

A Consumer Price Index (CPI) is designed to measure changes in prices of commodities and services which households purchase for their daily lives. The base year for the CPI is 2015. The CPI is constructed by using the prices of 460 representative items. The weights are derived from the share of each survey item in the monthly average consumption expenditures (the population for weights) of the Household Income and Expenditure Survey. The price data are collected in 38 regions (Seoul, Busan, Sejong, etc.) three times per month for 'agricultural, livestock & fishery products' and oils, and one time per month for industrial products and services and housing. The CPI is calculated by using a weighted arithmetic mean (Laspeyres formula).

9. Export and Import Price Indexes ¹⁾

The export and import price indexes are primarily compiled to measure the influence of export and import prices on domestic prices. The number of selected commodities is 210 items for export and 233 for imports. All prices are on a contract base and the terms of delivery are defined principally as F.O.B. for exports and C.I.F for imports.

Note: 1) After 2019 figures are preliminary.

2) An aggregate (or any intermediate aggregate) valued at chained prices is not identical with the sum of its components because of non-additivity.

3) Since each component's chained-won estimates could not represent the relative importance within their relevant components accurately, users should keep in mind the characteristic when they compare a component with others relatively.

4) Waste management and remediation activities are included.

2) An aggregate (or any intermediate aggregate) valued at chained prices is not identical with the sum of its components because of non-additivity.

3) Since each component's chained-won estimates could not represent the relative importance within their relevant components accurately, users should keep in mind the characteristic when they compare a component with others relatively.

4) Waste management and remediation activities are included.
